

Wellness Coaches' "Summary of Key Client Healthcare Metrics"

In late 2017, Wellness Coaches began to roll-out our healthcare data analytics platform for customers utilizing our onsite coaching services. Implementation of our platform is designed to; (1) provide customers with greater insight into their healthcare utilization trends, (2) help us design customized coaching strategies and programming to tackle their high risk, high cost issues, and (3) measure the impact coaching efforts are having on key customer data metrics.

Below is a summary of key current aggregate results achieved for all employee populations utilizing our data analytics platform. We believe the outcomes further demonstrate our long-standing view that onsite wellness coaching is the **single most powerful approach** to help employers have a meaningful impact on the well-being, quality of life and healthcare costs of their employee population.

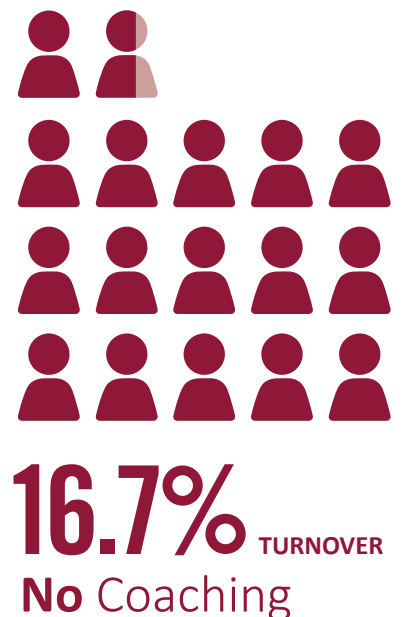

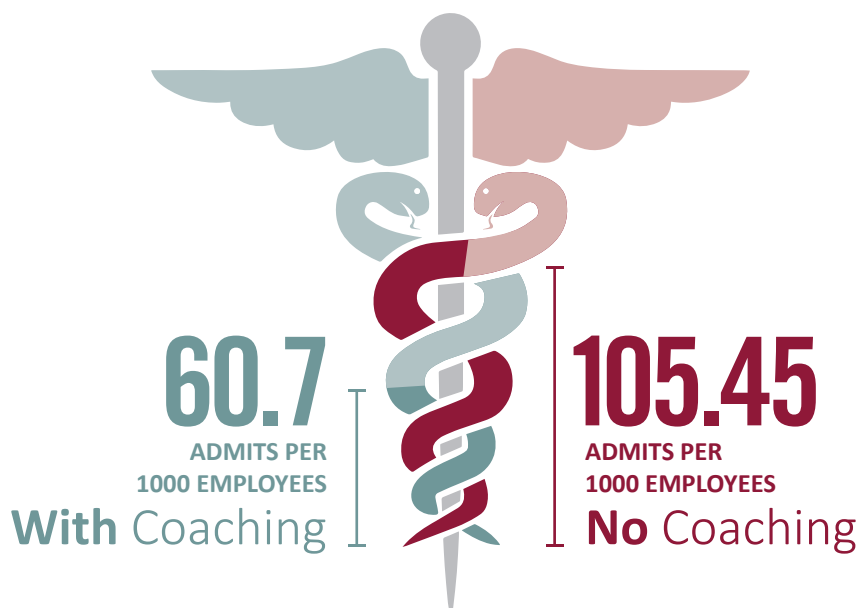

Medical & RX Claims PEPM

Employee Turnover

Hospital Admits Per 1000

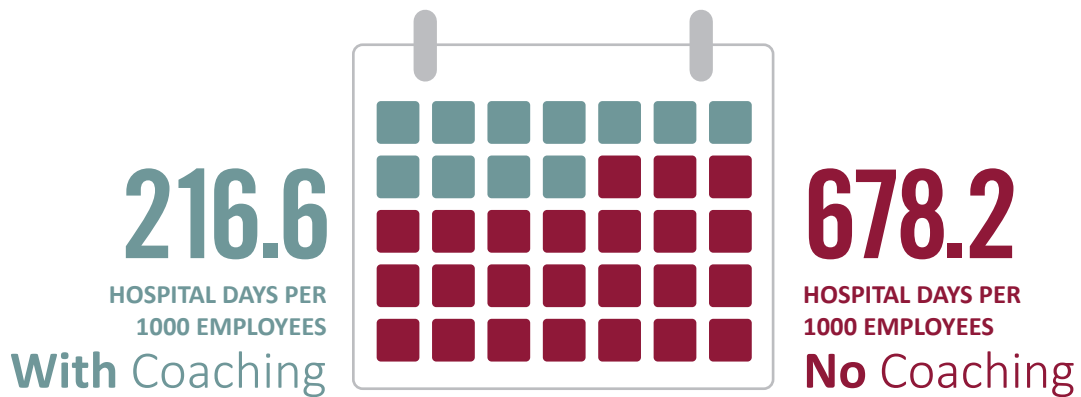

Wellness Coaches delivers results straight to your bottom line.

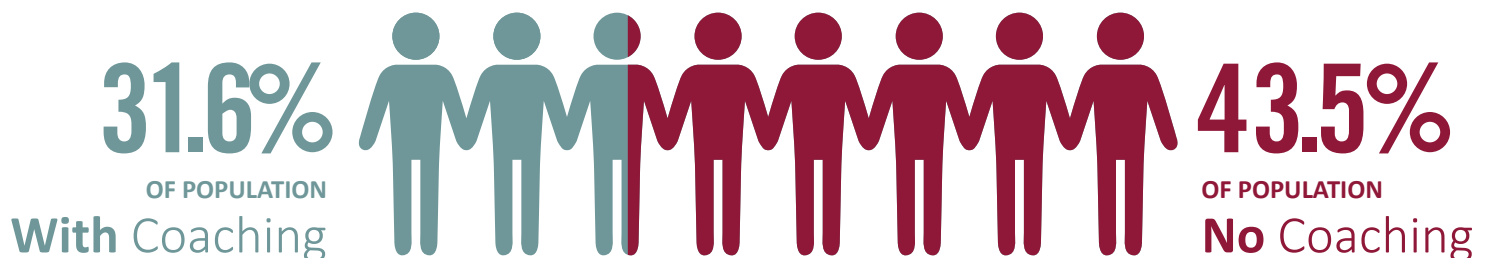

ER Visits Per 1000

Days in Hospital Per 1000

Percentage of Population with Gaps in Care

Contact **Gene McGuire** to learn how Wellness Coaches can deliver similar result for you.
